 - 30.89% or 2.48 lb. ai/gal. 2,4-D (WSSA group 4)
 - 8.23% or 0.66 lb. ai/gal. MCPA (WSSA group 4)
 - 7.25% or 0.50 lb. ai/gal. triclopyr (WSSA group 4)
 - 2.77% or 0.22 lb. ai/gal. dicamba (WSSA group 4)
- Signal Word: Warning (contains 2,4-D and requires eye protection)
- Formulation: Liquid concentrate

How to Apply

- Best applied from spring through fall at temperatures above 50°F and below 90°F
- Broadcast apply at 3.25 to 4.0 pints/A on 30-day intervals on cool-season turf up to a maximum of 8 pints/A/yr.
- Broadcast apply at 2.0 to 2.25 pints/A on 30-day intervals to dormant warm-season turf for a maximum of 2 applications/yr.
- Can be applied in as little as 10 gal. H₂O /A (0.25 gal. /1,000 sq. ft.) so can be used in ride-on sprayers
- Spot applications of 1.2 to 1.5 fl. oz./1,000 sq. ft. in 1 gal. H₂O/1,000 in backpack sprayers for cool-season turf
- Spot applications of 0.75 to 0.83 fl. oz./1,000 sq. ft. in 1 gal. H₂O/1,000 in backpack sprayers for dormant warm-season turf
- Rainfast in 4 hours
- Use on newly established turf:
 - Treated areas can be reseeded three weeks after application
 - Wait to apply until after second or third mowing of new seedings
 - Wait to apply until after 3 to 4 weeks of sodding or sprigging
