

Product Information Sheet

Control crabgrass AND broadleaf weeds in cool-season grasses with one solution

Terradex™ Crabgrass & Broadleaf controls those difficult late spring and summer weeds with a combination of three active ingredients. Flexible applications with broadcast and spot treatments – it's the perfect cleanup for areas that didn't receive a preemergence herbicide or you're seeing breakthrough.

All Skills, No Frills

- Labeled for 192 broadleaf and annual grassy weeds including crabgrass, foxtails, white clover, dandelions, oxalis, plantains, and Virginia buttonweed
- Ideal application timing is shortly after crabgrass has germinated **or** after it has matured beyond 5 tillers
- Cost-effective, broad-spectrum control

Product Information

- Active ingredients (% by weight)
 - 13.29% or 1 lb. ai/gal. 2,4-D (WSSA group 4)
 - 9.79% or 0.75 lb. ai/gal. quinclorac (WSSA group 4)
 - 1.67% or 0.125 lb. ai/gal. dicamba (WSSA group 4)
- Signal Word: Warning (contains 2,4-D and requires eye protection)
- Formulation: Liquid concentrate

How to Apply

- Best applied from spring through summer at temperatures less than 90°F, shortly after crabgrass has germinated **OR** after crabgrass has matured beyond 5 tillers
- Broadcast apply at 7 to 8 pints/A on 14-to-21-day intervals up to a maximum of 16 pints/A/yr.
- Can be applied in as little as 20 gallons H₂O /A (0.5 gallons /1,000 sq. ft.) so can be used in ride-on sprayers
- Spot applications of 2.6 to 2.9 fl. oz./1,000 sq. ft. in 1 gal. H₂O/1,000 in backpack sprayers
- Include a methylated seed oil for best control
